

ELEVATE CREATIVE GROUP

End-to-End Accounting & Month-End Close

ENGAGEMENT SUMMARY

QuickBooks Online bookkeeping, reconciliation, close and financial reporting

Engagement Type	Simulated accounting engagement	Business Type	Small creative-services company
Accounting Basis	Accrual basis	Accounting Platform	QuickBooks Online
Scope	Full accounting cycle through month-end close	Currency	USD
Status	Completed	Purpose	Professional portfolio demonstration

1. Engagement Overview

Elevate Creative Group is a simulated small creative-services business created to demonstrate an end-to-end accounting and bookkeeping workflow in QuickBooks Online. The engagement replicates the process an accountant would follow from initial accounting setup through transaction processing, reconciliation, month-end close and financial reporting.

The project focuses on practical bookkeeping accuracy, account classification, receivables and payables control, bank and credit-card reconciliation, period-end review and production of decision-useful financial reports.

2. Scope of Work

- Established the company accounting structure and Chart of Accounts covering assets, liabilities, equity, revenue, direct costs and operating expenses.
- Configured customers, vendors, products and services, employees and contractors.
- Structured revenue and cost-of-service categories appropriate for a creative-services business.
- Recorded and reviewed sales invoices, customer receipts, vendor bills, vendor payments and operating expenses.
- Applied customer receipts to outstanding invoices and maintained accounts receivable integrity.
- Applied vendor payments to outstanding bills and maintained accounts payable integrity.
- Processed bank and credit-card activity and categorized operating expenses to appropriate accounts.
- Performed bank reconciliation and reviewed A/R and A/P balances as part of the control process.
- Completed month-end close procedures, including applicable adjusting entries and final review.
- Generated and reviewed final financial statements and supporting reports.

3. Accounting Controls & Quality Procedures

- Used a structured Chart of Accounts to promote consistent classification and reliable reporting.
- Separated revenue, direct project costs and operating expenses to support meaningful profitability analysis.
- Matched vendor payments to recorded bills rather than re-expensing settled payables.
- Applied customer receipts against the underlying invoices to prevent overstated accounts receivable.
- Reconciled bank and credit-card activity to identify missing, duplicated or incorrectly classified transactions.
- Reviewed receivables and payables aging reports during the close process.
- Performed a final financial-statement review after closing the accounting period.

4. Key Deliverables

Workstream	Deliverable	Status
Company Setup	Business profile, accounting policies and Chart of Accounts	Completed
Master Data	Customers, vendors, products/services, employees and contractors	Completed
Transaction Processing	Sales, invoices, receipts, bills, payments and expenses	Completed
Reconciliation	Bank/credit-card reconciliation and A/R/A/P review	Completed
Month-End Close	Adjustments, close review and final trial balance	Completed
Financial Reporting	Profit & Loss, Balance Sheet, Cash Flow and aging reports	Completed

5. Management Reporting & Insights

The completed bookkeeping cycle provides management with a structured view of revenue, direct project costs, operating expenditure, profitability, cash position, receivables and payables. Separating direct project costs from operating expenses also creates a foundation for evaluating service-line and project profitability.

Final financial statements and aging reports should be reviewed together: profitability indicates operating performance, while reconciled cash, receivables and payables provide the supporting picture of liquidity and working capital.

6. Engagement Outcome

The engagement progressed from company setup and master-data configuration through transaction processing, reconciliation, month-end close and financial reporting. The completed file demonstrates practical bookkeeping controls and accounting judgment rather than software navigation alone.

7. Professional Capability Demonstrated

- QuickBooks Online accounting and bookkeeping workflow management
- Accrual-basis transaction processing
- Chart of Accounts design and account mapping
- Accounts receivable and accounts payable management
- Bank and credit-card reconciliation
- Expense classification and transaction controls
- Month-end close and financial-statement preparation
- Financial reporting and management-oriented review

8. Portfolio Disclosure

This is a simulated portfolio engagement created for professional demonstration and skills development. Elevate Creative Group is a fictional business, and its transactions and financial reports are simulated. The project demonstrates accounting process, control discipline, QuickBooks Online proficiency and month-end bookkeeping capability; it is not represented as work performed for a paying client.
